

Exceptional footcare for all ages.

J.Richard **Werkman**
CHIROPODIST

Footcare Newsletter: May 2012

Introducing Our New Dynamic Duo!

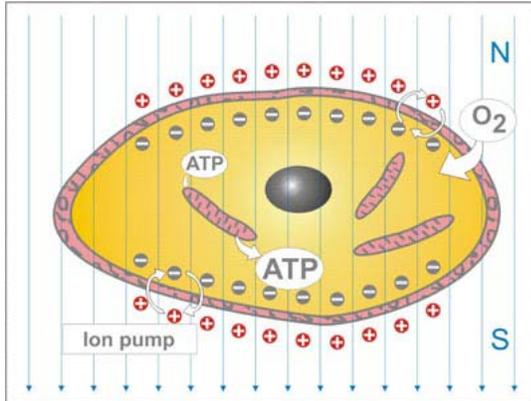

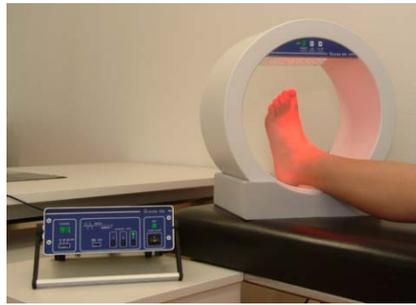

We've introduced a new non-invasive therapy as a complement to your rehabilitation regime for the treatment of diabetic wounds and neuropathy, sports injuries and osteoarthritis: **Combination Magnetic Bio-Stimulation (MBS) and Laseranalogous Light Energy System (LES) Therapy**. MBS and LES Therapy is not intended to replace, but rather enhance your rehabilitation program that may include one or all of the following: rest, ice, compression, elevation and stretching.

By increasing blood supply and metabolism, magnetic bio-stimulation and infrared rays can be used to target a specific area, or to treat the entire body. Say **hello to healing** with our new Combination MBS/LES Therapy for:

- sports related foot injuries
- bursitis, achilles tendinitis, plantar faciitis heel pain
- muscular strains and sprains
- ulcers/wounds
- connective tissue damage
- acute and chronic inflammation
- non union fractures
- pain associated with osteoarthritic conditions

Keep in mind MBS/LES Therapy does not replace your other rehabilitation efforts, but rather works along with them. This means that taking the time to do everything you're supposed to (and not supposed to) is key to getting results!

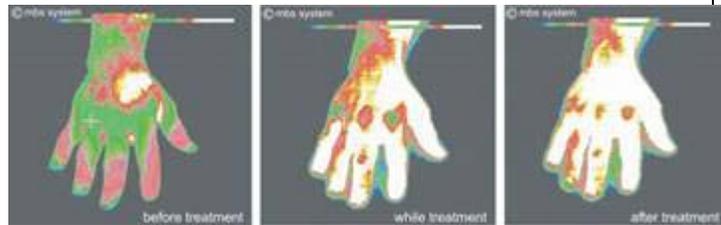

Pulsating Magnetic Field Therapy (PMT) and magnetic Biostimulation are more modern and sophisticated versions of a treatment that has a long history: the use of magnetic fields to stimulate circulation and increase oxygen.

Effects of magnetic bio stimulation on the cell.

The therapeutic effect of magnetic Biostimulation is based on its stimulation of circulation, and the exchange of ions between the inner and outer cell wall. Both of these contribute to the overall functioning of the cell, and the whole body. The ability to have an effect at the cellular level is unique to magnetic field therapy, enabling it to reach parts of the body that other treatment methods cannot reach. Magnetic field treatments have a long history, dating back to 1530, and the MBS series is the newest and most effective form of the therapy to date.

Thermograph illustration (right) shows the improved circulation with the light surfaces on the hands.

Combination MBS/LES Therapy is an effective, non-prescription, and non-invasive treatment when added to your rehabilitation program. To answer the question we're asked most often... **"does it hurt?"** we can unequivocally respond, **"not at all."** Some patients report a slight pulsating feeling and others report no feeling whatsoever.

To learn more about the success of this new therapy, findings from clinical studies, or to [book an appointment](#), give us a call or send us an email today!

We're looking forward to seeing you again soon!
